

RLDatix Certified Professional Practitioner for DatixCloudIQ

Effectively design, implement and manage your
DatixCloudIQ (DCIQ) system

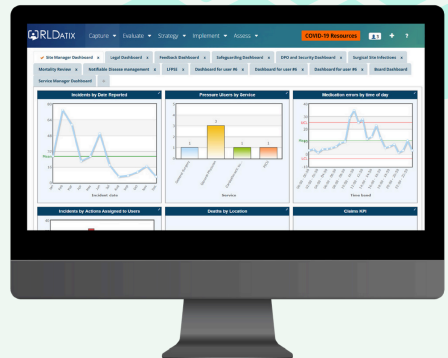

The RLDatix Certified Practitioner for DCIQ (DCIQ DCP) is an advanced course that helps you realise the full potential of RLDatix.

Upon completion you will be able to effectively design, implement and manage your system to support the needs of your organisation.

The course uses a mix of learning methods to support you in building an incident management system according to best practice.

Who should attend this course?

This course is aimed at RLDatix Administrators whose team wish to benefit from a technically proficient professional, who has hands-on experience and in-depth knowledge of the latest best practice implementation techniques.

What are the key benefits to you?

The DCIQ DCP course allows you to go beyond simple daily management of your DCIQ system. By learning how to build a DCIQ system from scratch, you can align your own system with organisational strategies and initiatives, capturing more relevant data and creating better patient safety outcomes. Learn how to effectively deal with change management as and when required based on organisational priorities.

Experienced, TAP certified trainers work with you to enhance your skills, ensuring your system configuration is and will continue to be managed in line with best practice initiatives. You can streamline capture of data, securing delivery of quality outcomes and improvements.

“DCIQ supports a shift from simple capture and review of incidents, towards a managed process of exposing and resolving issues that lead to an incident or risk”.

What else does the RLDatix Certified Practitioner for DCIQ course offer you?

SECURITY

You will learn how to set up profiles, security groups, ACL groups, roles and rules, and manage users. Streamline data access by allowing staff quick and easy access to relevant information and ensure confidential data is only shared with appropriate staff members.

CONFIGURATION

Adapt the system to your local requirements. Learn how to configure settings, design your own forms and determine field coding, with combo-linking of fields and dynamic form design.

REPORTING

Easily create multiple reports according to the needs of your organisation. You will learn how to search and save queries, build and package reports and set up dashboards for fast and easy visibility of data for all reporting levels within the Capture Toolkit.

SUPPORT

The course consists of two three-day training workshops split across a six-week programme. Experienced trainers are on hand throughout the entire course for any advice or assistance required

Assessment Method

Training days allow some time for project work, which should be further worked on and completed during the training break. Please plan for a minimum of 15 hours to complete this work, although the length of time needed varies from person to person. On Day 5 of the course, delegates will undertake an online written assessment and on Day 6, attendees will be required to present their project work in order to pass the training.

Upon successful completion you will receive an industry recognised qualification, including a certificate and logo for use in email signatures. The DCIQ DCP Practitioner course will empower you to be confident in the data you are reporting, enabling you to support quality management and push the patient safety program within your organisation.
